Abstract:

EP 332802 A

(1) Carbonyl gp.-contg. cyclic cpds. of formula (I)-(IV) are useful as plasticisers for polymers. m, n=2-13; (m+n)=10-15; p= 0 or 1; q=0 or 1; x=4-6; k=5-7, R=16-18C alkyl (2) A polymer compsn. (V) is claimed contg. 0.5-30 (pref. 2-10) wt.% of at least one of the plasticisers (I)-(IV).

Pref. (V) contains at least one of the following polymer types: polyamide, EVA copolymer, PUR, epoxy, nitrocellulose, PV-acetal, PVA, PE, polyisobutylene, polyester, poly(meth)acrylate, PC, silicone, poly-alcohol, polycaprolactone, polycaprolactam, cellulose ester, cellulose ether.

ADVANTAGE - Cpds. (I)-(IV) are non-toxic and compatible with many types of plastics. Typical applications are in polymer films for controlled-release dosage forms for drugs, e.g. sublingual, intrauterine, transdermal system, etc.
